## 2. Before use:

Please read carefully before using our product manual, which tells you the detailed installation and correct use, Then can avoid damage and injury caused by improper operation . Particularly important is that it tells you a lot about safety precautions, Please memorize these and guide your child with patience. Please place the instructions in easily accessible place for future reference.

## 3. Specification

|                     |                                                  |               |                     |
|---------------------|--------------------------------------------------|---------------|---------------------|
| External dimensions | 87*42.5*44.5 cm                                  | Power Mode    | Rechargeable        |
| User's proper age   | suitable for children<br>around 37-96 months old | Charging Spec | 6V 500mA            |
| Loading limitation  | 20 KGS                                           | Charging Time | 8-12 hours.         |
| Speed               | 3 km/hr                                          | Power life    | 280 times charging. |
| Battery Spec        | 6V, 4.5AH                                        | Fuse Spec     | Self-resetting fuse |

## 4.Cautions For Safety

- (1). The product must be assembled by adults. Before use check whether the adult assemble correctly according to the instructions.
- (2). To avoid injury to small parts, children under 3 years old prohibited.
- (3). Children should stay away from the plastic bags, prevent children from covering the head leading to choking hazard
- (4). When using, Children should wear safety helmets and must be guarded and guided by adults, and not to leave the child alone to avoid accidents.
- (5). Max Capacity is 20kgs.Please donnot overload.
- (6). The motorcycle should drive on the plat surface It is prohibited to drive on streets, slopes or any other dangerous places.
- (8). When the motorcycle moving, user should not be free to turn forward, backward switch, After the motorcycle stopped,then can switch the forward and backward switch.
- (9). Do not reverse push and lateral pull the motorcycle in the normal driving to prevent the rollover risk.
- (10). The battery charger to be operated by an adult, do not let children charge the battery.
- (11). Do not directly wash the motorcycle with water or rain the motorcycle.To prevent water damage to the motor circuit
- (12). Adults should check regularly (once every two weeks suggested), wires, plugs, electrical, housing, steering systems, fastening is normal or not, If there is any problem,then stop use until the fully restored.
- (13). The motorcycle battery and the charger is not a separate toy, donnot let the children play the battery and charger.
- (14). Please use the matched battery and charger, and a stable charging voltage to ensure safe when charging, and extend battery life.
- (15). Spare parts exchange should be operated by an adult, because the battery is very heavy, and the internal acidic electrolyte, if any leakage should avoid contact with liquid, and need a professional disposition. If accidental contact with the electrolyte, it is timely at least 15 minutes rinse with cold water and seek medical treatment.
- (16). Avoid the short circuit of the power, to prevent the risk of burning.
- (17). This product cannot store in the high-temperature places or near the fire, prevent plastic parts melt, charging away from flammable materials to prevent fires.
- (18). Shall not use the different specifications fuse.
- (19). Don't recharge the non-rechargeable batteries, don't mix the old and new or different types of batteries. Shall not be casually discarded, attention to environmental protection.
- (20). No using or long-term no use the motorcycle, please pull out the battery on the red line, the switch is "off" position, to ensure circuit safety.
- (21). Donnot exposure the motorcycle to the sun or using the motorcycle in the rainy days.
- (22). Keep the package bags in the proper place for further use because there is important information on it.

## 5. Parts Drawing

|                                                                                                                        |                                                                                                                                                                |                                                                                                                             |

## 6. Exploded Diagram

Tools:

screw-driver

## 7. Product Assembly Chart

2. Put the rear empenage into the body.

3. Before assembling the steering wheel, first, connect the insert parts on the steering wheel with the insert parts on the car body.

## 8. The use of information

- (1) The vehicle has the music.
- (2) If the vehicle is running at a slow speed, it should be charged in time and charged for 8-12 hours. Don't charge the battery over 15 hours. The charger has a slight heat phenomenon when charging, which is a normal phenomenon.
- (3) The function of the vehicle is as follows:

Functions:

1. The vehicle has press the start switch when using driving function and step the when using.
2. Forward / backward switch device. Push forward, the vehicle will go forward and press backward, the vehicle will go backward
3. The handle has horn and music function.

## 9. Fused tube

The vehicle use self-tapping fuse. When overloading or improper use, the fuse will be automatically cut off in 10-20 seconds, and then will automatically connect the power.

To avoid the cutting off, please pay attention:

- (1). The maximum weight limited of the motorcycle is 20KG.
- (2). Not stall the car running or heavy trailer behind.
- (3). May not liquid immersion, it may cause the short circuit.
- (4). Donnot revise the vehicle's circuit or the structure.

## 10. Charging

- (1). Like the below picture, put the charger into the vehicle's charging hole.
- (2). Like the picture, the power plug into the matched stable AC power.

Attention when charging:

1. To assure the safety, adults should do the battery charging,
2. First using , fully charged, need to charge another 8-12 hours.
3. Charge the battery if the vehicle runs slower, can charge 8-12 hours. But cannot charge over 15 hours.
4. Cannot open or decompose the battery and charger, should use the matched charger and battery.
5. When charging, cannot upside down the battery.
6. Before charging, check the charger , battery and the plug is ok or not. If broken, no use. After repaired, then can use.
7. Charge the battery fully if you will store it for a long time, then charge it every 3 month, in this way you can extent the lifetime of the battery.

## 11. Care and maintenance

- (1). Adults should check regularly (once every two weeks suggested), wires, plugs, electrical, housing, steering systems, fastening is normal or not, If there is any problem, then stop to use until the fully restored
- (2). Clean vehicles please use soft, dry cloth to wipe, can not use water or fuel cleaning, that will lead to corrosion switch and caused switch failure.
- (3). This product cannot store in the high-temperature places or near the fire, or in moist places. The product should be covered in the snowy and rainy days.
- (4). Charge the battery fully if you will store it for a long time, then charge it every 3 months, in this way you can extend the lifetime of the battery.
- (5). Stop using, pls take off the battery from the vehicle and make the switched on "OFF" position, also cut off the power. Keep the battery in proper place. Do not allow children play the battery.
- (6). When maintenance, do not revise the vehicle's circuit and structure. The key parts should be maintained and guided by the professional staff.
- (7). Don't recharge the non-rechargeable batteries, don't mix the old and new or different types of batteries. Pay attention to the positive and negative.
- (8). In the unstable supply voltage region. We recommended to install voltage stabilizer to protect the battery

## 12. Trouble Shooting

The vehicle does not move.

1. Check forward and back switch is in neutral position switch or not.  
(Middle of the switch is neutral position)
2. Check the power's positive and negative cord is plugged firmly
3. Fuse melted or jump off.
4. Check the charger is plugging into the charging hole or not. If yes, the vehicle will cut off automatically. After plugging off the charger, then can use.
5. Foot switch or manual button is stuck down then cannot press ?
6. Whether there is debris stuck wheels

The vehicle moves slowly.

1. Whether battery power is sufficient, if so, need timely charge.
2. Whether there is debris stuck wheels.
3. Whether the vehicle is overloaded.
4. Whether the charger is broken then the battery cannot be charged.

The battery cannot be fully charged.

1. Check the charger is ok or not. When charging, the charger will be warm is normal.
2. Check the battery is ok or not.
3. Check the charger or the battery connection is loose or not.

**Exhausted batteries are to be removed from the toy.  
Rechargeable batteries are only to be charged under adult supervision.**

**Warning. Not to be used in traffic.  
This toy has no backe.**

**The toy should be used with caution since skill is required to avoid falls or collisions causing injury to the user or third parties.**

**Batteries are to be inserted with the correct polarity.  
Rechargeable batteries are only to be charged under adult supervision.**

**Rechargeable batteries are to be removed from the toy before being charged.**

**The instruction shall state that transformers or battery charger used with the toy are to be regularly examined for damage to the cord, plug, enclosure and other parts, and in the event of such damage, they must not be used until that damage had been repaired.**
